

Audio Controlled Devices

The easiest (but not the cheapest) way to have Jennifer remotely control a device is to get an audio controlled estim such as:

http://store.e-stim.co.uk/index.php?main_page=product_info&cPath=23_27&products_id=2

To set this up to work, first you will need to set up your estime under the equipment setting in options.

Equipment

For device 1 (or 2 if already used) select “E-Stim” and then either left or right Audio. Click on save at the bottom of options and then return to the message view.

Now link your e-stim to the headphone socket of your computer or phone (you may want to switch off notification sounds 😊) with the cable normally supplied with your device. Once connected and back

in the message view it is recommend that you click on  to check it is working.

A cheaper option?

Looking at [How Audio Output Works](#) It may also work to simply plug an amplifier between your laptop headphones and some e-stim pads?

Search ebay for “Audio Amp DC 9V” and you should be able to get one for under £4 - **Not tested** yet so please report back if you feel brave to try this out! If this works may be good for linking into Raspberry Pi projects?

May be worth a look at this <https://kinkitech.wordpress.com/stereo-stim-usb/>

Homemade device 1

Video of how to make:
