The current To-Do list for known issues and suggestions:

Additional random tasks

Added option to add via wiki - Needs to be easier to create tasks e.g. optional GUI

Game Mode

Not that clear when user in “Game mode” (Displayed above message window) + Hides important messages.

When in game mode, the shared messages are displayed above any personal messages including tasks and messages from Jennifer so can easily be missed.

The suggestion is to either have “game mode” messages displayed in a box above the normal messages or merge both game and non game streams in time order. The Game mode flag could also be highlighted in a different colour?

AI

Better matching so does not always match as easily when saying word “cum” etc.. Flag up when requesting level change.

beforeunload event to the task page

Give warning if leaving task page before finished.

random vs tasks

More skill games against other player(s) e.g. Group strip rock paper scissor

Automated password management

If login fails give option of having a new random password emailed to them.

Better external mistress / master flexibility

Allow an option to be controlled by just external not Jennifer (like old sub-control sexscript) Assign trust status to external - if trusted can increase mood, decrease denial etc.. externals can control more than one person

Referral system

Make current referral system more official e.g. ask who if anyone recommended them at initiation.
